

Recordex RX-100PC™

Multi-Function Disc AutoLoader

RIP Your CD Collection to MP3!

Everyone wants to load their iPod but no one wants to spend the countless hours required to rip their CD collection to MP3. Now there is an easier way. Simply load your discs into the RX-100 and let it rip up to one hundred CDs in one automated session. Each track is saved as a separate file to your computer's hard drive.

Want to rip to something other than MP3...not a problem. The RX-100 can rip to MP3, WMA, WAV, and OGG. You also have full control over bitrate, sample rate, encoder quality, and sound channel configuration. Configure for maximum compression or maximum quality or strike the perfect balance!

Incredible Warranty Protection

Nobody understands service like Recordex, and we'll prove it with our Standard 12-Month No Hassle Warranty and friendly knowledgeable service staff.

Dust Proof, Nearly Silent, and Cool!

Our enclosed design means the system will stay dust free and is more protected from spills and bumps. It also means that this is one of the quietest autoloaders on the market. It also has a powerful cooling fan to keep this tiny little autoloader cool as it rifles through discs. Run it all day...it won't mind!

Automated Duplication Perfected

The RX-100 features a professional gravity feed disc loading system that smokes the competition. It can load and unload a disc in 3 seconds flat! This little beauty also features single master and multi-master copy modes for doing one job at a time or multiple jobs at once. Available in a PC Attach model for multi-use environments and in a Stand Alone, no-computer required model for professional duplication applications (see back for StandAlone Model).

Full Feature Software Included

The RX-100PC comes bundled with a premium software suite that turns the RX-100PC into a multi-function CD/DVD appliance. Rip CDs to MP3, Backup Data, Create and Restore ISO files, Erase RW discs, duplicate data discs, and burn copies of audio files to disc.

Huge Capacity!

Compared to other similar priced duplicators the RX-100 is well endowed. You can duplicate unattended for hours with the full 100 capacity input bin and output bin.

Small Footprint Gives You More Desk

If you look around you'll find that most autoloaders are real-estate hogs! They love to eat up your precious desk space. Not the RX-100. Designed to take up as little space as possible the RX-100 features a very small foot print of just 10" x 14". That is right it is only 10" wide! You could install three or even four units in the space required by some autoloaders.

Where is the Robot? Good Question!

Our autoloader features a fully enclosed professional gravity disc feeding system designed to deliver discs with amazing speed. Many autoloaders feature robotic picking arms. The problem is that eventually someone will pick up the unit by the robotic picking head, or simply bump it on their way past the desk. This can cause unwanted down time while you realign the pick head, or even expensive repair bills! With the RX-100 you won't ever need to realign the pick head. We say...why should you!

RIP • BURN • BACKUP • ERASE • TEST • COPY

PRODUCT SPECIFICATIONS

RX-100PC - PC Attached Multi-Function CD/DVD Autoloader

Disc Capacity: 100 Disc Input & 100 Disc Output
Also Ships with 50 Capacity Output Bin

Copy Technology: Attaches to PC via USB 2.0 Connection and utilizes the bundled software to perform many disc burning and ripping functions.
